building linux virtual private networks vpns pdf Best

VServer is use to create a virtual private server (VPS). Sukrit Dhandhanias show us how to build VPS quickly with VServer. FTA BSD users can improve system security with that operating system's jail mechanism, which creates a partition of resources, thereby creating a logical barrier between services running inside different such jails.

Howto: Building Linux virtual private server (VPS) with

Building Linux Virtual Private Networks (VPNs) covers the most popular VPN technologies available for the Linux platform. In the early chapters the theory behind VPNs is discussed, including needs and uses. Common network and host configurations are also covered. Subsequent chapters drill down into the

implementation and configuration of specific software packages.
