Vitamin B 12, also called cobalamin, is a water-soluble vitamin that is involved in the metabolism of every cell of the human body: it is a cofactor in DNA synthesis, and in both fatty acid and amino acid metabolism. It is particularly important in the normal functioning of the nervous system via its role in the synthesis of myelin, and in the maturation of developing red blood cells in the ...

Cyanocobalamin is a cobalt-containing coordination compound produced by intestinal micro-organisms and found also in soil and water. Higher plants do not concentrate vitamin B 12 from the soil and so are a poor source of the substance as compared with animal tissues.

Cyanocobalamin (commonly known as Vitamin B12) is the most chemically complex of all vitamins. Its chemical structure is based on a *_corrin_* ring, which, although quite similar to the porphyrin ring found in heme, chlorophyll, and cytochrome, has two of the pyrrole rings directly bonded. The central metal ion in cyanocobalamin is Co (*_*). Cyanocobalamin (Vitamin B12) is not produced by plants or ...

Homocysteine is an amino acid that is typically present in very small amounts in all cells of the body. That is because the body normally converts homocysteine into other products quickly. Since vitamins B6, B12, and folate are necessary to metabolize homocysteine, increased levels of the amino acid may be a sign of deficiency in those vitamins.

A natural product is a chemical compound or substance produced by a living organism—that is, found in nature. In the broadest sense, natural products include any substance produced by life. Natural products can also be prepared by chemical synthesis (both semisynthesis and total synthesis) and have played a central role in the development of the field of organic chemistry by providing ...

If I asked you which of these vitamins was found naturally in food, folate or folic acid, would you know the answer? If not, you're in good company. Medical professionals, nutrition experts, and health practitioners frequently mix up the two, simply because the terms are often used interchangeably. Many health professionals would even argue that folate and folic acid are essentially the same ...

I am always open to new information, but I am really sorry to say that the information provided here is often outdated and mostly inaccurate. First of all, there is a recent study that shows nori (algae "Porphyra yezoensis") contains a significant amount of bioactive vitamin B12, not the inactive analogues.
