

### **continuous time markov processes pdf**

Note that there is no definitive agreement in the literature on the use of some of the terms that signify special cases of Markov processes. Usually the term "Markov chain" is reserved for a process with a discrete set of times, i.e., a discrete-time Markov chain (DTMC), but a few authors use the term "Markov process" to refer to a continuous-time Markov chain (CTMC) without explicit mention.

### **Markov chain - Wikipedia**

A Markov decision process is a 4-tuple  $(S, A, P, R)$ , where  $S$  is a finite set of states,  $A$  is a finite set of actions (alternatively,  $A(s)$  is the finite set of actions available from state  $s$ ),  $P(s, a, s') = P(s, a, s')$  is the probability that action  $a$  in state  $s$  at time  $t$  will lead to state  $s'$  at time  $t+1$ ,  $R(s, a)$  is the immediate reward (or expected immediate reward) received after transitioning from state  $s$  to state  $s'$  ...
