De Broglie, in his 1924 PhD thesis, proposed that just as light has both wave-like and particle-like properties, electrons also have wave-like properties. By rearranging the momentum equation stated in the above section, we find a relationship between the wavelength,  $\lambda$  associated with an electron and its momentum,  $p$ , through the Planck constant,  $h$ :  $h = p\lambda$ .

Theories of light propagation in the 17th and 18th centuries. During this period, many scientists proposed a wave theory of light based on experimental observations, including Robert Hooke, Christiaan Huygens and Leonhard Euler. However, Isaac Newton, who did many experimental investigations of light, had rejected the wave theory of light and developed his Corpuscular theory of light according ...

Einstein saw a wave randomly "collapse" twenty years before there was a "wave function" and the Schrödinger wave equation. He discovered the existence of indeterministic chance as a "weakness" in quantum theory over a decade before Heisenberg published his indeterminacy principle. He deplored his discoveries.
